11 July 2026

Dear Editors,

We are submitting the author-proofread files for manuscript `symmetry-4339980`, entitled "Multi-Granularity Feature Decomposition with Ranking-Aware Regularization for Old Film Restoration," for final production in *Symmetry*.

Manuscript ID: symmetry-4339980
Production stage: Author Proofreading / Final Proof

We carefully checked the complete production PDF and addressed all 23 copy-editor queries. The proof corrections are limited to author metadata, terminology, abbreviation definitions, figure and table explanations, references, access information, and production layout. The model design, experimental results, numerical values, equations, and scientific conclusions remain unchanged.

The principal proof actions are summarized below:

1. Confirmed the author order, affiliations, correspondence information, and the verified ORCID for Qi Zhang.
2. Defined abbreviations independently at first appearance in the abstract, the main text, and the first relevant figure or table, as requested by the copy editor.
3. Clarified figure colors, arrows, dashed paths, region-of-interest boxes, ground-truth labels, the archival PATHÉ watermark, table direction arrows, and computational units.
4. Checked all 27 equations, 8 figures, 5 tables, citations, references, URLs, and access dates; the final 28-page PDF was also inspected for clipping, overlap, blank pages, and unreadable content.
5. Confirmed that the code, configurations, and evaluation scripts are publicly available in the MgfrOFR public GitHub repository.

The accompanying upload contains the final LaTeX source package, the independently compiled proof PDF, the verified supplementary-video archive, the non-published supporting material, and this Final Proof Cover Letter. The submitting author will complete the final author confirmations in SuSy after reviewing the uploaded files.

Thank you for your assistance during production.

Sincerely,

Youdong Ding
